About Kreidler

# *We live bikes.*

*As an owner-managed family enterprise, we have always relied on our entrepreneurial independency and traditional values.  
We live and work at achieving the joint aim of developing the perfect bicycle for all areas of use and that with a passion.  
We hereby feel an ardour for bicycles that goes much further than the technical aspect.*

*At Kreidler, the subject bicycle is inseparably connected to a positive lifestyle that is characterised by vitality and a joie de vivre.  
This enables us to combine entrepreneurial tradition and precise workmanship with our passion and enthusiasm in Oldenburg.*

*These emotions drive us on every day anew – and with great commitment and lots of love for detail, we have succeeded in breathing new life into an almost forgotten brand. Today's Kreidler bicycles "Made in Oldenburg" convince with their excellent quality, modern design and innovative technology.*

*We always increasingly score in independent tests or in the tough racing conditions faced by our factory mountain bike team.*

***We live bikes – for your future and ours.***

# The Kreidler Quality Strategy

## Made in Oldenburg

*Our site in Oldenburg was and remains an affair of the heart. We like living here and feel a strong bond with nature and the special people here in the region.*

*Today, we manufacture here in Oldenburg using six modern production lines, ensuring a consistently high quality and the safety of our customers with our own test centre and testing laboratory. Kreidler and Oldenburg – more than “Made in Germany”.*

## Focus on people

*We do not simply want to satisfy our customers, but enthral them with a high quality. Competent employees are our most important capital when it comes to completing this task.*

*This is why we train young people and promote the individual strengths of each of our employees. Specialist trade partners value us as a reliable supplier and partner. We hereby rely on long-term cooperations and a creative dialogue.*

## Strike a new path

*With great innovative strength and a keen sense of trends that make sense, we develop products that always correspond with the latest state of cycling art and current zeitgeist.*

*We hereby often go off the beaten track and enter new unknown terrain. After all, we aim to always question that which exists and developing our bicycles further year for year.*

## About Kreidler

## KREIDLER BIKES – “MADE IN OLDENBURG”

“Made in Germany” is an international term for quality, art of engineering, precision, craftsmanship and durability. These terms are also of the greatest relevance in the Kreidler production in Oldenburg.

### Continual improvement of first class products

Our high standard and the extensive experience in the development, production and assembly fields are a guarantee for the continuously high quality of our bikes.

The quality assurance in our own test laboratory especially serves a permanent product improvement and the aim of providing our customers with a durable product that is made in Germany.

On the basis of our “Made in Oldenburg” quality promise, we manufacture bikes in the form of a perfect interaction between brand name components, the latest technology and modern production methods.

### “Made in Oldenburg” means:

- a perfect combination of high-tech and craftsmanship
- experienced specialists along the entire production chain
- sustainable products and manufacturing processes
- quality management from the planning to the logistics
- a modern, ergonomic design
- durable products with a high degree of functionality
- first-class service and strict customer orientation

## KREIDLER TEST LABORATORY – QUALITY NEEDS SAFETY

Nowadays, the design of bikes and e-bikes are more complex than ever: components, component assemblies and increasingly lighter frames need to function reliably and safely as a whole, despite being subjected to all influences – this having validity for both e-bikes and our “normal bikes”.

This is the reason why we have our own internal test and quality laboratory in which all of the test requirements that are specified in the European norms, are taken as the basis. In order to take possible extreme situations into account, all of the test fields are so designed that the simulated loads are much higher than those specified in the norms.

In addition, a high precision measuring table for the measuring of angles and clearances enables geometry and deformation tests to be conducted on frames and forks. In doing so, we test the manufacturing precision and the adherence to safety-relevant production tolerances.

Our test centre also ensures a permanent quality assurance in the ongoing production, thereby providing us with an advantage when it comes to developing high quality bikes.

## CHASSIS

.....

The balanced kinematics of the 27.5 inch bike guarantees almost 100% anti-squat in low gears and a stable suspension thanks to the active pedal bob suppression. Downhill and at high speed in high gears, the decoupling of the suspension and the drive provides for the best possible utilization of the spring deflections. The chassis is supported by a slightly progressive gear ratio and a top damper performance.

## FRAME & GEOMETRY

.....

- Hydroformed aluminium frame 7005 with a tapered head tube and the interior laid cables – a top combination of weight, rigidity and design
- Horst link 4-link – reduced influence of the brake on the suspension
- Damper link on the seat stay – reduced friction and a sensitive triggering of the rear suspension
- Damper positioned in the frame triangle – protects from mud and dirt daub
- Balanced weight distribution – perfect handling and the best control
- 75° seat angle – ergonomical seat position and an effective power transmission
- Flat steering angle – very smooth running and safe handling
- 435 mm chain stay length – a guarantee for manoeuvrability, smooth running and the best climbing behaviour
- 340 mm bottom bracket bearing height – greater safety due to the feeling of “sitting in the bike”

## ADDITIONAL EQUIPMENT

.....

- Kind Shock eTEN Remote – concealable seat post for a fast adaptation to the terrain
  - Flexible derailleur mounting – direct mount for 1x1 and double or triple gearshifts
  - Shimano BB Pressfit-inner bearing
  - 142 mm quick-release axle
- 
-

KREIDLER  
FACTORY TEAM

## WITH A PASSION FOR RACING

The starting signal also gets the adrenalin racing through the body. Our entire team focusses on this moment. Each inattention when starting can already determine victory or defeat. When it comes down to it, the absolutely highest demands are placed on the body, spirit and material. We are ready – with passion and enthusiasm!

Our passion has a name: "bike" and we are often asked where this enthusiasm comes from. Is it the early feeling on the child's bike? Or has the fascination of speed and adventure captivated us? Each of the racing cyclists has his own answer and story. But one thing is certain: the love of bike racing is in every one of us and does not let us go anymore. It is the heart of our daily work, our motivation and repeatedly inspires us to achieve top results – during training, when developing bikes and when racing.

### From two to three.

In order to develop the team further after the success experienced in the first year, we have taken two new cyclists under contract for the 2015 season. In addition to the old hand Torsten Marx, the two ambitious young professionals Markus Bauer and Christopher Platt are now also a part of the Kreidler factory team.

You will find more information

Safety

# SMART BATTERY POSITION

## THE CLEVER POSITION FOR BOSCH BATTERIES – GREATER SAFETY AND IMPROVED CYCLING CHARACTERISTICS.

In addition to the drive unit, the battery is still the heaviest element on an e-bike and has a decisive effect on the handling and the cycling characteristics. We have experimented with various battery positions in recent years and it really is the case that all of them have both advantages and disadvantages. When conducting our current test in the practise and in our Kreidler test laboratory however, one position gained points in all fields. This is the reason why our latest generation of wave frames for Bosch drive units have been optimized for our new “smart battery position” behind the seat tube.

### The advantages at a glance:

- the low centre of gravity increases the stability and makes manoeuvring easier
- the “simple tilting” of the e-bike is a thing of the past
- the luggage rack can be put to full use, enabling it to be loaded with heavier loads
- there are no restrictions when getting on the e-bike
- the clever geometry with the slightly longer wheelbase results in an improved directional stability
- the bike has a tidier, more inconspicuous and sporting look
- the battery can be charged in situ

By the way: you can find  
Kreidler's electric scooters at [www.kreidler.com](http://www.kreidler.com)

## THE SECCON SAFETY CONCEPT

MAX. WEIGHT  
**140KG**

The product development always has the safety of our customers in mind. Nowadays, Kreidler e-bikes not only have an attractive design and sophisticated technology, but also an innovative safety concept. With our "SECCON – Security Concept" seal of quality, we have formed the basis of a plus in e-bike safety at an early stage.

The safety concept also takes innovations in the frame design and components into account and the criteria for the granting of the SECCON seal of quality are permanently adapted in a dynamic process.

### **1 Stable tubes due to hydroforming**

A tube geometry that is formed by fluid being applied from the outside at high pressure: a high tensile force and hardness with an optimal dimensional and form accuracy.

### **2 Interior laid cables**

Not affected by soiling and external damage. Makes an overall tidy impression.

### **3 "Oversized"–Lenker**

A larger diameter in the clamping area: greater safety resulting from an increased rigidity.

### **4 Tapered head tube**

Improves the stability and rigidity, providing for a high load capacity and a precise steering behaviour.

### **5 Intelligent frame design for more cycling stability without frame oscillation**

Kreidler e-bikes offer a perfectly smooth running and a simple handling – with no frame oscillation whatsoever.

### **6 High max. permissible total weight**

All Kreidler e-bikes have a max. permissible total weight of 140 kg – our model "Vitality Eco Plus" can even be loaded with max. 170 kg.

## E-Bikes | Comfort

As one of the pioneers in the field of e-bike technology and on the basis of the experience gained from millions of cycled kilometres, Panasonic supplies a fully developed drive unit. The compact and reliable mid-drive motor is especially quiet when running and is driven by a 540 Wh lithium-ion battery. The Panasonic system that is especially for e-bikes with a focus on comfort presents itself with a control panel that is easy to read and with three meaningful support modes.

## Panasonic

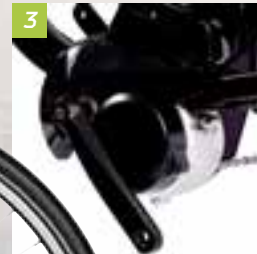

1

2

3

## VITALITY ECO 7 SHIMANO NEXUS 8-SPEED

Available with freehub or coasterbrake.

**SYSTEM** Panasonic mid-motor / battery 540 Wh

**FRAME** aluminium 6061

**SIZE** Wave 28": 45, 50, 55 cm

**FORK** Suntour CR85-E25

**SHIFTING** Shimano Nexus 8-speed with freehub or coasterbrake

**BRAKES** Magura HS22, hydr. rim brake

**TIRES** Schwalbe Energizer, 40-622

**WEIGHT** CB: 26,8 kg (with battery),  
FH: 26,6 kg (with battery)

**COLOUR** silver matt

### 1 CONTROL PANEL

The display provides a good readability even in direct sunlight and numerous items of information, e.g. the average, maximum or current speed, the total and the trip kilometres, the remaining range and the support modus. The handlebar operation provides greater safety as the hands remain on the handlebars. Smartphones or MP3 players, etc. can be charged via an USB port.

### 2 BATTERY

The easy to remove battery can either be charged at the bike or by using an external stand charger and has an output of 540 Wh for a max. range of 155 km\*. The time required for a full charging of the lithium-ion battery amounts to around 6 hours.

### 3 MID-DRIVE MOTOR

The compact and lean mid-drive motor system from Panasonic weighs approx. 3 kg and with a robust planetary gear, it has an output of 250 W.

*\*depending on the support mode, the weight of the cyclist, the tyre pressure, the terrain and environmental influences such as wind or the temperature*

Technical Information Source: Panasonic

# VITALITY ECO 4 Di2

## SHIMANO NEXUS 8-SPEED

**SYSTEM** Steps mid-motor / battery 400 Wh  
**FRAME** aluminium 6061  
**SIZE** Wave 28": 45, 50, 55 cm  
**FORK** Suntour CR85-E25  
**SHIFTING** Shimano Nexus 8-speed with coasterbrake  
**BRAKES** Magura HS22, hydr. rim brake  
**TIRES** Schwalbe Energizer, 40-622  
**WEIGHT** 24,2 kg (with battery)  
**COLOUR** shiny white

### 1 DISPLAY

Discrete, clear and transparent – the STePS bike computer clearly displays the most important information. In addition to the current, average or the maximum speed, the display also provides information on the selected support mode, the remaining range or the distances travelled.

### 2 BATTERY

Enduring, strong and reliable – the lithium-ion battery has a capacity of 418 Wh and max. ranges of 120 km\*. The battery is fully charged after just 4 hours. It is discretely integrated in the luggage rack, can be easily removed and weighs just 2,5 kg.

### 3 MID-DRIVE MOTOR

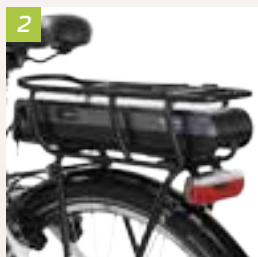

Compact, light and powerful – with its output of 250 W, STePS has a max. torque of 50 Nm and weighs 3,1 kg. The mid-drive motor provides support in the modes Eco, Normal or High, depending on requirements. The drive unit is very quiet and scores points with a simple handling.

### 4 CHAIN & CRANKSET

Robust, smooth, low maintenance – the strong drive unit enables forces to act on the chain and the crankset that are stronger than in the case with "normal" bikes. With the STePS component, SHIMANO is offering especially robust system components that are able to compensate the higher loads without difficulty.

Technical Information Source: Shimano

## SHIMANO STePS

STePS from Shimano is a fully integrated e-bike drive system. The mid-drive motor works perfectly with the crankset, the battery and the bike computer. The Vitality Eco 4 was especially developed for STePS and complements the system with its high quality equipment.
